

U.S. Supreme Court

U. S. v. HOLT STATE BANK, 270 U.S. 49 (1926)

270 U.S. 49

UNITED STATES

v.

HOLT STATE BANK et al.

No. 47.

Argued April 24-27, 1925.

Decided February 1, 1926.

[270 U.S. 49, 50] The Attorney General and Mr. W. W. Dyar, of Washington, D. C., for the United States.

[270 U.S. 49, 51] Mr. A. N. Eckstrom, of Warren, Minn., for appellees.

Mr. Justice VAN DEVANTER delivered the opinion of the Court.

This is a bill in equity by the United States to quiet in it the title to the bed of Mud Lake-now drained and uncovered-in Marshall county, Minnesota, and to enjoin the defendants from asserting any claim thereto. After answer and a hearing the District Court entered a decree dismissing the bill on the merits. The United States appealed to the Circuit Court of Appeals, where the decree was affirmed (294 F. 161), and then by a further appeal brought the case here. [270 U.S. 49, 52] Mud Lake is within what formerly was known as the Red Lake Indian Reservation, which had an area exceeding 3,000,000 acres and was occupied by certain bands of the Chippewas of Minnesota. Most of the reservation, including the part in the vicinity of Mud Lake, was relinquished and ceded by the Chippewas conformably to the Act of January 14, 1889, c. 24, 25 Stat. 642, for the purposes and on the terms stated in that act. It provided that the lands when ceded should be surveyed, classified as 'pine lands' and 'agricultural lands,' and disposed of in designated modes; that such as were classified as agricultural should be disposed of under the homestead law at a price of \$1.25 an acre; and that the net proceeds of all, whether classified as pine or agricultural, should be put into an interest-bearing trust fund for the Chippewas and ultimately disbursed for their benefit or distributed among them.

The cession became effective through the President's approval March 4, 1890. Thereafter the lands in the vicinity of Mud Lake were surveyed and platted in the usual way; the lake being meandered and represented on the plat as a lake. The tracts bordering on the lake were classified as agricultural, opened to homestead entry, and disposed of to homestead settlers; patents being issued in due course. The defendants now own and hold these tracts under the patents. After the homestead entries were allowed, and after most of them were carried to patent, the lake was drained and its bed made bare by a public ditch constructed under the drainage laws of the state. The United States then surveyed the bed with the purpose of disposing of it for the benefit of the Indians under the act of 1889, and later brought this suit to clear the way for such a disposal.

The lake in its natural condition covered an area of almost 5,000 acres and was traversed by Mud river, a tributary of Thief river, which was both navigable in [270 U.S. 49, 53] itself and directly connected with other navigable streams leading to the western boundary of the state and thence along that boundary to the British

possessions on the north.

The ditch which drained the lake was established as a means of fitting for cultivation a large body of swamp lands in that general vicinity. It is as much as 30 miles long, and, like Mud river, passes through the lake and discharges into Thief river. Its depth exceeds that of the lake, and its width and fall are such that it has drawn the water out of the lake. Its construction was begun in 1910, and was so far completed in 1912 that the lake was then effectively drained.

The swamp lands which the ditch was intended to reclaim were within the ceded portion of the Red Lake Reservation. Some had been disposed of under the act of 1889 and thus had passed into private ownership; but the absence of necessary drainage was preventing or retarding the disposal of the others. Congress caused an examination to be made to determine whether drainage was physically and economically feasible (Act June 21, 1906, c. 3504, 34 Stat. 352, and Act March 1, 1907, c. 2285, 34 Stat. 1033), and a report of the examination was made (H. R. Doc. No. 607, 59th Cong. 2d Sess.). Shortly thereafter Congress gave its assent to the drainage of the lands under the laws of the state by declaring that all lands not entered and all entered lands for which a final certificate had not issued should 'be subject to all of the provisions of the laws of said state relating to the drainage of swamp or overflowed lands for agricultural purposes to the same extent and in the same manner in which lands of a like character held in private ownership are or may be subject to said laws.' Act May 20, 1908, c. 181, 35 Stat. 169, s 1 (Comp. St. s 4970).

The laws of the state, to the application of which assent was thus given, authorized the establishment of public drainage ditches by judicial proceedings and provided that [270 U.S. 49, 54] such ditches might be so established as to widen, deepen, change or drain any river or lake, even if navigable and whether meandered or not. Laws 1905, c. 230; Gen. Stat. 1913, ss 5523, 5525, 5531, 5553, et seq. The ditch which drained Mud Lake was established by judicial proceedings begun under these laws after the congressional consent was given, and it is not questioned that those proceedings made it entirely lawful to construct the ditch through the lake and to drain it as an incident of the reclamation project in hand.

The defendants insist that the lake in its natural condition was navigable, that the state, on being admitted into the Union, became the owner of its bed, and that under the laws of the state the defendants, as owners of the surrounding tracts, have succeeded to the right of the state. On the other hand, the United States insists that the lake never was more than a mere marsh, that the state never acquired any right to it, that the surveyor should have extended the survey over it when he surveyed the adjacent lands, and that the United States is entitled and in duty bound to dispose of it under the act of 1889 for the benefit of the Chippewas.

Both courts below resolved these contentions in favor of the defendants; and whether they erred in this is the matter for decision here.

It is settled law in this country that lands underlying navigable waters within a state belong to the state in its sovereign capacity and may be used and disposed of as it may elect, subject to the paramount power of Congress to control such waters for the purposes of navigation in commerce among the states and with foreign nations, and subject to the qualification that where the United States, after acquiring the territory and before the creation of the state, has granted rights in such lands by way of performing international obligations, or effecting the use or improvement of the lands for the purposes of commerce [270 U.S. 49, 55] among the states and with foreign nations, or carrying out other public purposes appropriate to the objects for which the territory was held, such rights are not cut off by the subsequent creation of the state, but remain unimpaired, and the rights which otherwise would pass to the state in virtue of its admission into the Union are restricted or qualified accordingly. *Barney v. Keokuk*, [94 U.S. 324](#), 338; *Shively v. Bowlby*, [152 U.S. 1, 47](#), 48 S., 57, 58, 14 S. Ct. 548; *Scott v. Lattig*, [227 U.S. 229, 242](#), 33 S. Ct. 242, 44 L. R. A. (N. S.) 107; *Port of Seattle v. Oregon & Washington R. Co.*, [255 U.S. 56, 63](#), 41 S. Ct. 237; *Brewer-Elliott Oil & Gas Co. v. United States*, [260 U.S. 77](#), 83-85, 43 S. Ct. 60, 67, L. Ed. 140.

But, as was pointed out in *Shively v. Bowlby*, at pages 49, 57, 58 (14 S. Ct. 548), the United States early adopted and constantly has adhered to the policy of regarding lands under navigable waters in acquired territory, while under its sole dominion, as held for the ultimate benefit of future states, and so has refrained from making any disposal thereof, save in exceptional instances when impelled to particular disposals by some international duty or public exigency. It follows from this that disposals by the United States during the territorial period are not lightly to be inferred, and should not be regarded as intended unless the intention was definitely declared or otherwise made very plain.

The state of Minnesota was admitted into the Union in 1858 (11 Stat. 285, c. 31), and under the constitutional principle of equality among the several states the title to the bed of Mud Lake then passed to the state, if the lake was navigable, and if the bed had not already been disposed of by the United States.

Both courts below found that the lake was navigable. But they treated the question of navigability as one of local law to be determined by applying the rule adopted in Minnesota. We think they applied a wrong standard. Navigability, when asserted as the basis of a right arising under the Constitution of the United States, is necessarily a question of federal law to be determined according to [270 U.S. 49, 56] the general rule recognized and applied in the federal courts. *Brewer- Elliott Oil & Gas Co. v. United States*, supra, at page 87 (43 S. Ct. 60). To treat the question as turning on the varying local rules would give the Constitution a diversified operation where uniformity was intended. But notwithstanding the error below in accepting a wrong standard of navigability, the findings must stand if the record shows that according to the right standard the lake was navigable.

The rule long since approved by this court in applying the Constitution and laws of the United States is that streams or lakes which are navigable in fact must be regarded as navigable in law; that they are navigable in fact when they are used, or are susceptible of being used, in their natural and ordinary condition, as highways for commerce, over which trade and travel are or may be conducted in the customary modes of trade and travel on water; and further that navigability does not depend on the particular mode in which such use is or may be had—whether by steamboats, sailing vessels or flatboats—nor on an absence of occasional difficulties in navigation, but on the fact, if it be a fact, that the stream in its natural and ordinary condition affords a channel for useful commerce. *The Montello*, 20 Wall. 430, 439; *United States v. Cress*, [243 U.S. 316, 323](#), 37 S. Ct. 380; *Economy Light & Power Co. v. United States*, [256 U.S. 113, 121](#), 41 S. Ct. 409; *Oklahoma v. Texas*, [258 U.S. 574, 586](#), 42 S. Ct. 406; *Brewer-Elliott Oil & Gas Co. v. United States*, supra, p. 86 (43 S. Ct. 60).

The evidence set forth in the record is voluminous and in some respects conflicting. When the conflicts are resolved according to familiar rules we think the facts shown are as follows: In its natural and ordinary condition the lake was from three to six feet deep. When meandered in 1892 and when first known by some of the witnesses it was an open body of clear water. Mud river traversed it in such way that it might well be characterized as an [270 U.S. 49, 57] enlarged section of that stream. Early visitors and settlers in that vicinity used the river and lake as a route of travel, employing the small boats of the period for the purpose. The country about had been part of the bed of the glacial Lake Agassiz and was still swampy, so that waterways were the only dependable routes for trade and travel. Mud river after passing through the lake connected at Thief river with a navigable route extending westward to the Red River of the North and thence northward into the British possessions. Merchants in the settlements at Liner and Grygla, which were several miles up Mud river from the lake, used the river and lake in sending for and bringing in their supplies. True, the navigation was limited, but this was because trade and travel in that vicinity were limited. In seasons of great drought there was difficulty in getting boats up the river and through the lake; but this was exceptional, the usual conditions being as just stated. Sand bars in some parts of the lake prevented boats from moving readily all over it, but the bars could be avoided by keeping the boats in the deeper parts or channels. Some years after the lake was meandered, vegetation such as grows in water got a footing in the lake, and gradually came to impede the movement of boats at the end of each growing season, but offered little interference at other times. Gasoline motor boats were used in surveying and marking the line of the

intended ditch through the lake and the ditch was excavated with floating dredges.

Our conclusion is that the evidence requires a finding that the lake was navigable within the approved rule before stated. From this it follows that no prejudice resulted from the recognition below of the local rule respecting navigability.

We come then to the question whether the lands under the lake were disposed of by the United States before Minnesota became a state. An affirmative disposal is [270 U.S. 49, 58] not asserted, but only that the lake, and therefore the lands under it; was within the limits of the Red Lake Reservation when the state was admitted. The existence of the reservation is conceded, but that it operated as a disposal of lands underlying navigable waters within its limits is disputed. We are of opinion that the reservation was not intended to effect such a disposal and that there was none. If the reservation operated as a disposal of the lands under a part of the navigable waters within its limits it equally worked a disposal of the lands under all. Besides Mud Lake, the reservation limits included Red Lake, having an area of 400 square miles, the greater part of the Lake of the Woods, having approximately the same area, and several navigable streams. The reservation came into being through a succession of treaties with the Chippewas whereby they ceded to the United States their aboriginal right of occupancy to the surrounding lands. The last treaties preceding the admission of the state were concluded September 30, 1854, 10 Stat. 1109, and February 22, 1855, 10 Stat. 1165. There was no formal setting apart of what was not ceded, nor any affirmative declaration of the rights of the Indians therein, nor any attempted exclusion of others from the use of navigable waters. The effect of what was done was to reserve in a general way for the continued occupation of the Indians what remained of their aboriginal territory, and thus it came to be known and recognized as a reservation. *Minnesota v. Hitchcock*, [185 U.S. 373, 389](#), 22 S. Ct. 650. There was nothing in this which even approaches a grant of rights in lands underlying navigable waters; nor anything evincing a purpose to depart from the established policy, before stated, of treating such lands as held for the [270 U.S. 49, 59] benefit of the future state. Without doubt the Indians were to have access to the navigable waters and to be entitled to use them in accustomed ways; but these were common rights vouchsafed to all, whether white or Indian, by the early legislation reviewed in *Railroad Co. v. Schurmeier*, 7 Wall, 272, 287-289, and *Economy Light & Power Co. v. United States*, supra, pp. 118-120 (41 S. Ct. 409), and emphasized in the Enabling Act under which Minnesota was admitted as a state (chapter 60, 11 Stat. 166), which declared that the rivers and waters bounding the state 'and the navigable waters leading into the same, shall be common highways, and forever free, as well to the inhabitants of said state as to all other citizens of the United States.' Section 2.

We conclude that the state on its admission into the Union became the owner of the bed of the lake. It is conceded that, if the bed thus passed to the state, the defendants have succeeded to the state's right therein, and the decisions and statutes of the state brought to our attention show that the concession is rightly made.

Decree affirmed.

Footnotes

[[Footnote 1](#)] Other reservations for particular bands were specially set apart, but those reservations and bands are not to be confused with the Red Lake Reservation and the bands occupying it. See Treaty concluded October 2, 1863, 13 Stat. 667.
